

We Purchased two Super Conditioners in April of 2000 and installed them on new Hesston 8550 Disc Mowers. Approximately 3000 acres of alfalfa & timothy have been cut with each machine. Dry down time on timothy has been reduced at least 50% allowing us to bale timothy at less than 10% moisture in 48 hours from the time of cutting. Alfalfa dry down time has been reduced up to 40%. Texture on both crops is much softer and more palatable to the cows and our dairy customers have seen an increase in milk production after switching to Super Conditioned alfalfa. Product support from Circle C Equipment has been excellent and we are extremely satisfied with our investment!
